

# VIKASH PATHAK

## AI/ML Engineer

Patna, India | +91 8210504367 | pathakvikash821@gmail.com | [github.com/pathakvikash](https://github.com/pathakvikash) | [LinkedIn](#)

### SUMMARY

---

AI Engineer with hands-on experience building LLM-powered applications, RAG pipelines, and AI agents in Python. Background spans RLHF and fine-tuning workflows, synthetic data generation, and full-stack product delivery. Comfortable with Docker and Git-based workflows, and looking to grow into cloud and DevOps practices to ship reliable AI systems in production.

### SKILLS

---

**AI/ML:** Prompt Engineering, RAG, LLM Fine-Tuning & Evaluation, RLHF, AI Agents, Function Calling, Synthetic Data Generation, NLP

**Languages:** Python, JavaScript/TypeScript, Java, SQL

**Agent Frameworks:** LangChain, LangGraph, CrewAI, Agno, AutoGen

**Infra & Tools:** Docker, Git, GitHub Actions, Vercel, REST APIs, FastAPI

**Databases:** PostgreSQL, MongoDB, MySQL, Vector Databases (Pinecone/FAISS)

**Learning now:** Kubernetes, Terraform, AWS/Azure/GCP fundamentals, observability (Prometheus/Grafana)

### EXPERIENCE

---

#### Backend Developer, GenAI Team — ChainBrain *May 2026 – Present*

- Built a BYO-LLM (bring-your-own-LLM) feature, letting users plug in their own model/provider for agent workflows.
- Implemented authentication for agent flows using Ory Keto, adding fine-grained permission checks.
- Enabled session sharing by making it public so private conversations can be accessible by other logged in user.

#### AI Engineer — Stealth Startup (Remote) *Dec 2024 – Jan 2026*

- Built RLHF-based pipelines in Python to improve LLM reasoning, function calling, and long-term memory.
- Designed synthetic data generation pipelines using multiple LLMs to produce preference and instruction datasets for fine-tuning.
- Partnered with the research team on reward modeling and fine-tuning objectives for human-aligned model behavior.
- Built internal tooling for data collection, labeling, and analysis to speed up experimentation cycles.

#### Frontend Engineer — Nimblebox.ai, Chennai *Mar 2023 – Aug 2024*

- Led a React-to-Next.js migration, cutting page load times by 30% and lifting organic traffic 20%.
- Built the UI for a cloud-based IDE and Jupyter notebook environment used by ML practitioners.
- Built backend admin panel APIs with Redux Toolkit (RTK).

#### MERN Stack Engineer — The Tan Man Gaadi (Remote) *Mar 2023 – Nov 2023*

- Built a full-stack e-commerce platform; optimized backend logic and queries for transaction efficiency.
- Designed and integrated authentication, cutting login-related issues by 40%.

### RELEVANT PROJECTS

---

#### Doc Summarizer — RAG-based document Q&A

- Built a chat interface for context-aware Q&A over uploaded documents using chunking, embeddings, and retrieval.
- Backend in Python and FastAPI with a vector database for semantic search over document content.

#### Text-to-SQL Agent — modular LLM pipeline

- Built a CLI agent that converts natural language to safe SQLite queries and summarizes results with an LLM.
- Added schema redaction, allowlist validation, and automatic query LIMITs to prevent data leaks and runaway costs.

#### Outreachr — recruiter outreach automation

- Automated finding recruiters and drafting outreach messages using CrewAI multi-agent workflows.

### EDUCATION

---

**B.Tech, Information Science and Technology** — Rungta College of Engineering and Technology (2020–2024)

**Software Engineering Development** — BossCoder Academy (2023–2024)

### CERTIFICATIONS
